Introduction to Nuclear Radiation Detectors

P. J. Ouseph

Department of Physics
College of Arts and Sciences
University of Louisville
Louisville, Kentucky

Bibliothek Chemie / Materialwissenschaft
Technische Universität Darmstadt

Inv. Nr.: 12264

PLENUM PRESS • NEW YORK AND LONDON

Contents

Chapter 1
INTRODUCTION ---------- 1

Chapter 2
NUCLEAR RADIATIONS AND THEIR INTERACTION WITH MATTER ---------- 7

2.1. Radioactivity ---------- 8
2.2. Radioactivity Calculations ---------- 10
2.3. Calculation of Activities Produced by Nuclear Reactions ---------- 15
2.4. Interaction of Heavy Charged Particles with Matter 20
2.5. Electron Interaction ---------- 29
2.6. Backscattering of Electrons ---------- 34
2.7. Interaction of Gamma and X Rays with Matter -- 37
2.8. Interaction of Neutrons ---------- 44
2.9. Cosmic Rays ---------- 46
References ---------- 46
Bibliography ---------- 46

Chapter 3
GAS COUNTERS ---------- 47

3.1. General Properties of Gas Counters ---------- 47

3.2. Ionization Counters ---- 52
3.3. Air-Wall Ionization Chamber ---- 52
3.4. Pocket Dosimeter ---- 53
3.5. Pulse-Type Ionization Counter ---- 54
3.6. Proportional Counter ---- 60
3.7. Position-Sensitive Proportional Counters ---- 66
3.8. Neutron Counters ---- 67
3.9. Geiger–Müller Counters ---- 68
3.10. Counter Gas ---- 74
3.11. Detection of Alpha and Beta Radiations by Geiger Counters ---- 76
3.12. Detection of X Rays and Gamma Rays by Gas Counters ---- 77
3.13. Application of Internal Counting Methods ---- 79
References ---- 81
Bibliography ---- 82

Chapter 4
SCINTILLATION COUNTERS ---- 83

4.1. General Characteristics of Scintillation Counting Systems ---- 83
4.2. Scintillant Materials and Mechanism of Scintillation 85
4.3. Photomultipliers ---- 95
4.4. The Shape of the Pulse ---- 100
4.5. Scintillation Counter Assembly ---- 101
4.6. Relationship between Pulse Height and Energy -- 102
4.7. Detection of Gamma Rays by Scintillation Counters ---- 104
4.8. Integral Counting ---- 109
4.9. Differential Counting and Determination of Energy of Gamma Rays ---- 111
4.10. Efficiency of Scintillation Counters for Gamma Detection ---- 115
4.11. Energy Resolution in Scintillant Detectors ---- 117

4.12. Detection of Charged Particles with Scintillation Counters ---- 120
4.13. Detection of Neutrons ---- 121
4.14. Particle Identification by Pulse Shape Discrimination ---- 123
4.15. Other Methods for Particle Identification and Discrimination ---- 124
References ---- 127
Bibliography ---- 127

Chapter 5
SEMICONDUCTOR DETECTORS ---- 129

5.1. Operation of a Semiconductor Counter ---- 129
5.2. Impurity Semiconductors ---- 133
5.3. Detector Types ---- 140
5.4. Pulse Shape and Rise Time ---- 148
5.5. Factors Affecting Energy Resolution ---- 149
5.6. Radiation Damage ---- 152
5.7. Detection of Charged Particles ---- 153
5.8. X-Ray and Gamma-Ray Detection ---- 158
5.9. Neutron Detectors ---- 161
5.10. Other Applications ---- 161
5.11. Special Techniques ---- 164
5.12. Concluding Remarks ---- 166
References ---- 167
Bibliography ---- 167

Chapter 6
CORRECTIONS IN RADIATION COUNTING ---- 169

6.1. Introduction ---- 169
6.2. Absolute Activity Determination ---- 178
6.3. Random Nature of Decay Process ---- 180
6.4. Frequency Distributions ---- 181
6.5. Statistical Errors in Nuclear Particle Counting ---- 185
References ---- 187
Bibliography ---- 187

APPENDIX: SELECTED CONSTANTS AND CONVERSION FACTORS ---------- 189

INDEX ---------- 191
